Environmental Product Declaration

STANLEY[®] Access Technologies Series 500 Manual Revolving Doors

STANLEY Access Technologies LLC

65 Scott Swamp Rd. Farmington, CT 06032 www.stanleyaccess.com | 860.677.2861

Product

Series 500 Manual Revolving Doors

Functional Unit

1 square meter of door opening maintained and operated for 20 years.

Scope

The scope of this EPD is Cradle-to-Gate with Scenarios

EPD Number and Period of Validity

SCS-EPD-04771 EPD Valid December 15, 2017 Version: January 9, 2018

Product Category Rule

Product Category Rule for Preparing an Environmental Product Declaration for Power-Operated Pedestrian and Revolving Doors. UNCPC 4212. ASTM International. September 2016.

Program Operator

SCS Global Services 2000 Powell Street, Ste. 600, Emeryville, CA 94608 +1.510.452.8000 | www.SCSglobalServices.com

Disclaimers: This Environmental Product Declaration (EPD) conforms to ISO 14025, 14040, ISO 14044, and ISO 21930.

Scope of Results Reported: The PCR requirements limit the scope of the LCA metrics such that the results exclude environmental and social performance benchmarks and thresholds, and exclude impacts from the depletion of natural resources, land use ecological impacts, ocean impacts related to greenhouse gas emissions, risks from hazardous wastes and impacts linked to hazardous chemical emissions.

Accuracy of Results: Due to PCR constraints, this EPD provides estimations of potential impacts that are inherently limited in terms of accuracy.

Comparability: The PCR this EPD was based on was not written to support comparative assertions. EPDs based on different PCRs, or different calculation models, may not be comparable. When attempting to compare EPDs or life cycle impacts of products from different companies, the user should be aware of the uncertainty in the final results, due to and not limited to, the practitioner's assumptions, the source of the data used in the study, and the specifics of the product modeled.

Only EPDs prepared from cradle-to-grave life-cycle-assessment results and based on the same function, quantified by the same functional unit, and meeting all the conditions in ISO 14025, Section 6.7.2 can be used to assist purchasers and users in making informed comparisons between products.

PCR review, was conducted by	Tom Gloria, Ph.D., Industrial Ecology Consultants (Chair)		
Approved Date: December 15, 2	2017 – End Date: December 14, 202	22	
Independent verification of the declaration and data, according to ISO 14025:2006 and ISO 21930:2007	□ internal	🗹 external

ABOUT STANLEY® Access Technologies

STANLEY[®] Access Technologies is committed to being an industry leader in door automation through exceptional service, high quality product innovation, and lowest total cost of ownership. For over 80 years, we have been designing, building, installing and servicing manual and automatic sliding, swinging, revolving and folding doors as well as sensors and controls.

Everywhere you go, you can find our trusted products throughout a wide variety of commercial, institutional, industrial and transportation applications.

Headquartered in Farmington, CT, STANLEY[®] Access Technologies is the largest manufacturer, installer and service provider of automatic doors in North America.

PRODUCT DESCRIPTION

STANLEY Access Technology's 500 Series Revolving Doors are manufactured in Markham, Ontario, Canada.

The 500 Series Revolving Door is a versatile manual revolving door designed for use in a variety of applications such as office buildings, restaurants, and banks. Its environmentally friendly design helps to improve interior comfort and energy efficiency in buildings while reducing infiltration of dust and dirt into the building entrance. The over-head speed control and heavy duty steel roller bearings will provide many years of trouble free service.

PRODUCT SPECIFICATION

 Table 1. Product specifications for the STANLEY Series 500 Manual Revolving Doors.

Features	Options
4-Wing design provides maximum seal against air infiltration	Tinted glass
Standard diameters: 6' 6" (1,981mm), 7.0' (2,134 mm), 7'6" (2,286 mm), 8'0" (2,438 mm)	Wing glass
Standard canopy heights: 3" (76.2 mm) profile	Quarter segment floor grille
Standard finishes: clear or bronze anodized	Full Roof made from aluminum sheet
Push bars: one 1" (25.4 mm) diameter round aluminum per wing	Canopy lighting - 4 -3/4" (120 mm) LED
Upper concealed collapsing mechanism	Special heights
Collapsing wings for emergency egress	Special finish
Curved 1/4" (6.35 mm tempered glass wall enclosure	Extended warranties
Locks - standard deadbolt	Maintenance and service contracts
Slim line door and enclosure sections	Quarter Pointing
Overhead speed control	
Conforms to all North American Building Codes	
1/4" (6.35 mm) tempered wing glass	
Surface mount installation for retrofits	
Half roof made from aluminum sheet	
Heavy duty steel roller bearings	

MATERIAL RESOURCES

The material composition and availability of raw material resources of the 500 Series Manual Revolving Doors are shown in Table 2. Information on product packaging is shown in Table 3.

			Availability			500 S	eries

ADDITIONAL ENVIRONMENTAL INFORMATION

STANLEY[®] Access Technologies is the only automatic door manufacturer with two US manufacturing facilities; Indianapolis, IN and Farmington, CT.

Stanley's Refurbish Equipment Program means no dumpsters required and no landfills used; oil and grease is recycled.

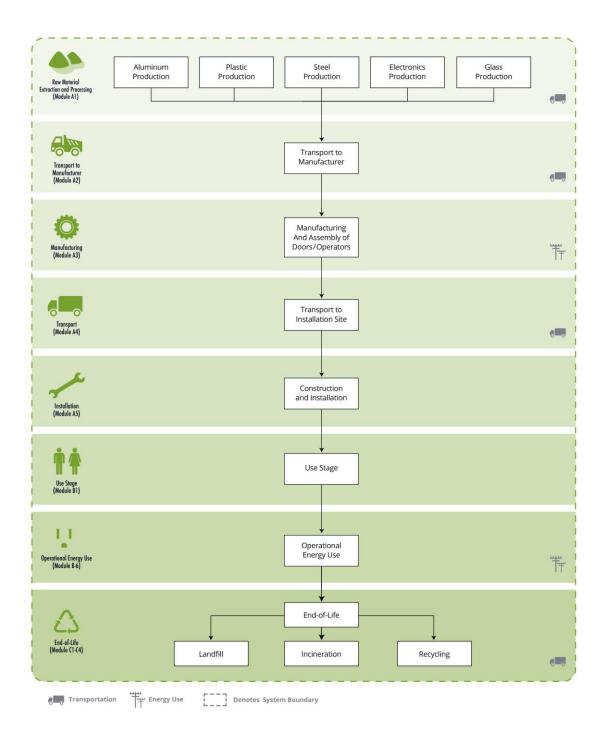

Our Plant Recycling Program recycles oil and grease, cardboard, white paper and scrap aluminum and steel.

In 2017, Stanley Access Technologies' Farmington factory installed a combustion-free Bloom Energy Server for clean energy. This server will deliver enhanced sustainability benefits including high efficiency greenhouse gas emissions, avoid air pollutants and significantly reduce water use.

Our aluminum vendors are ISO14001 and ISO 50001 certified to control their energy usage and environmental impacts.

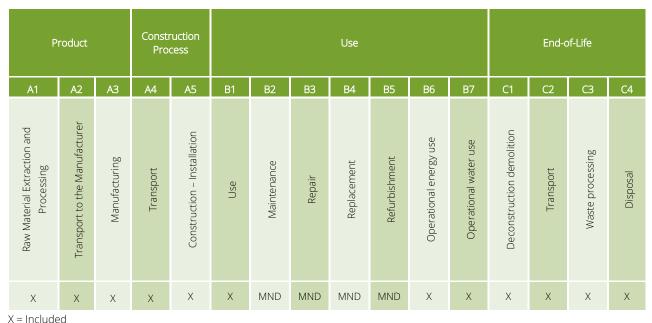

PROCESS FLOW DIAGRAM

The diagram below is a representation of the most significant contributions to the life cycle of the STANLEY Access 500 Series Manual Revolving Doors. The following life cycle stages are included: production (Modules A1-A3); construction & installation (Module A4-A5); product use (Modules B1, B6, and B7); and end-of-life (Modules C1-C4).

LIFE CYCLE ASSESSMENT OVERVIEW

The system boundary is cradle-to-gate with options and includes resource extraction and processing, product manufacture and assembly, distribution/transport, use, and end-of-life. The diagram below illustrates the life cycle stages included in this EPD.

MND = Module Not Declared

The following provides a brief overview of the Modules included in the product system for the STANLEY Access 500 Series Manual Revolving Doors.

Module A1: Raw material extraction and processing

This module includes the potential environmental impacts associated with the extraction and processing of raw materials for various component parts in the door products. The primary components are fabricated of aluminum and steel. The impacts from fabrication processes were based on representative datasets for metal product manufacturing. Impacts associated with the extraction and processing of the glass are also included in this phase.

Module A2: Transportation

This module includes transportation of processed raw materials and product components to STANLEY's Ontario, Canada manufacturing facilities.

Module A3: Manufacture of the Door Products

This stage includes all the relevant manufacturing processes and flows, including the impacts from energy use and emissions at the facility. Production of capital goods, infrastructure, manufacturing equipment, and personnel-related activities are not included. This stage also includes the production and disposal (including transport) of the product packaging materials.

Module A4: Transportation & Delivery to the Installation Site

This module includes the impacts associated with delivery of door product to the installation site.

Module A5: Construction & Installation

This module includes installation of the products.

Module B1: Normal use of the product

This module includes environmental impacts arising through normal anticipated use of the product. Energy use is accounted for in Module B6: Operational Energy Use.

Module B2: Maintenance

This module considers the impacts associated with cleaning and maintenance of the product over the product Reference Service Life (RSL). *Module Not Declared.*

Module B3: Repair

This module includes any anticipated repair events during the reference service life of the automatic doors. *Module Not Declared.*

Module B4-B5: Replacement and Refurbishment

These modules include anticipated replacement or refurbishment events during the reference service life associated with replacing a whole product (Module B4) and restoration of parts to a condition in which the products can perform its required function (Module B5). *Modules Not Declared*.

Module B6: Operational Energy Use

This module includes the primary energy consumption (electricity) associated with the operational use of these products. Operational energy use is estimated based on an assumed frequency of use and power rating of the product. For the Series 500 revolving Doors, operational energy use includes only overhead canopy lighting, estimated by the manufacturer as 88 kWh/yr under normal operating conditions.

Module B7: Operational Water Use

No water use occurs during the operation of the product and impacts are zero.

Module C1-C4: End-of-Life

The end-of-life stage of the product starts when it is replaced, dismantled or deconstructed from the building. Impacts for deconstruction and dismantling processes were not modeled in the LCA as it is a manual process with hand tools, and does not require any energy input for removal of the product. The impacts associated with transportation of waste materials to processing facilities, waste processing of material components and waste disposal of the product are included in these modules.

LIFE CYCLE IMPACT ASSESSMENT

Impact category indicators are calculated using the TRACI 2.1 and CML-IA characterization methods. TRACI 2.1 impact category indicators include global warming potential (100 years), acidification potential, smog potential, ozone depletion potential, and eutrophication potential. CML-IA impact category indicators include global warming potential (100 years), acidification potential, eutrophication potential, Photochemical Ozone Creation potential, ozone depletion potential, and abiotic resource depletion, in accordance with the PCR. The LCIA results are calculated using SimaPro 8.3 software. The results for these indicators are shown in Table 4.

Production Construction & End-of-Life Total Impact Category Installation A3 A4-A5 B1, B6, B7 C1-C4 **TRACI Impact Indicators** 340 1,400 780 3.7 50 200 3.3 Global Warming Potential (kg CO₂ eq) 14% 100% 57% 0.27% 24% 3.6% 0.24% 4.3 1.7x10⁻² 0.74 2.2x10⁻² 6.3 0.82 0.40 Acidification Potential (kg SO₂ eq) 100% 68% 0.27% 13% 6.5% 12% 0.35% 9.7x10⁻³ Eutrophication Potential 6.9 4.7 4.1x10⁻³ 0.59 6.7x10⁻² 1.6 (kg N eq) 100% 67% 0.06% 0.96% 0.14% 8.5% 23% 51 32 0.40 8.2 4.9 5.1 0.37 Smog Potential $(kg O_3 eq)$ 100% 63% 0.79% 16% 9.7% 10.0% 0.73% 3.4x10⁻⁵ 5.3x10⁻⁶ 1.6x10⁻⁵ 4.8x10⁻⁷ Ozone Depletion Potential 8.5x10⁻⁵ 2.8x10⁻⁵ 6.9x10⁻⁷ (kg CFC-11 eq) 0.80% 19% 0.56% 100% 33% 40% 6.2% CML Impact Indicators 1,400 790 3.7 340 50 200 3.4 Global Warming Potential (kg CO₂ eq) 100% 57% 0.27% 25% 3.6% 14% 0.24% 1.5x10⁻² 0.40 0.78 1.7x10⁻² Acidification Potential 6.3 4.2 0.85 (kg SO₂ eq) 0.28% 100% 67% 0.24% 13% 6.4% 12% 3.1 2.1 3.3x10⁻³ 0.28 5.1x10⁻² 0.70 5.6x10⁻³ Eutrophication Potential (kg PO₄³⁻ eq) 100% 67% 0.11% 9.0% 1.6% 22% 0.18% 0.40 0.29 6.3x10-4 6.0x10⁻² 1.5x10⁻² 3.4x10⁻² 1.1x10⁻³ Photochemical Ozone Creation Potential (kg C_2H_4 eq) 100% 72% 0.16% 8.7% 0.28% 15% 3.7% 8.6x10⁻⁵ 2.9x10⁻⁵ 6.9x10⁻⁷ 3.4x10⁻⁵ 5.3x10-6 1.7x10⁻⁵ 4.8x10-7 Ozone Depletion Potential (kg CFC-11 eq) 100% 33% 0.80% 40% 6.2% 19% 0.56% 2.5x10⁻³ 2.0x10⁻³ 1.1x10⁻⁵ 2.9x10⁻⁴ 1.4x10⁻⁴ 5.8x10⁻⁵ 3.7x10⁻⁶ Abiotic Depletion Potential, Elements (kg sb eq) 100% 80% 0.44% 11% 5.4% 2.3% 0.15% 15,000 7,400 59 4,900 620 2,400 47 Abiotic Depletion Potential, Fossil Fuels (MJ eq) 100% 48% 0.39% 32% 4.1% 15% 0.30%

Table 4. Results for 20 years of use of the STANLEY Access 500 Series Manual Revolving Doors.

ADDITIONAL ENVIRONMENTAL PARAMETERS

ISO 21930 requires that several parameters be reported in the EPD, including resource use, waste categories and output flows, and other environmental information. The results for these parameters are shown in Table 5.

Table 5. Results for 20 years of use of the STANLEY Access Series 500 Manual Revolving Doors door product by module. Results representing energy flows are calculated using lower heating (i.e., net calorific) values.

Data Quality

Data Quality Parameter	Data Quality Discussion
Time-Related Coverage Age of data and the minimum length of time over which data should be collected	The most recent available data are used, based on other considerations such as data quality and similarity to the actual operations. Typically, these data are less than 10 years old (typically 2016). All of the data used represented an average of at least one year's worth of data collection, and up to three years in some cases. Manufacturer-supplied data (primary data) are based on annualized production for 2016.
Geographical Coverage Geographical area from which data for unit processes should be collected to satisfy the goal of the study	The data used in the analysis provide the best possible representation available with current data. Electricity use for product manufacture is modeled using representative data for the appropriate eGRID and Canadian electricity grid mixes. Surrogate data used in the assessment are representative of North American or global operations. Data representative of global operations are considered sufficiently similar to actual processes. Data representing product disposal are based on US statistics.
Technology Coverage Specific technology or technology mix	For the most part, data are representative of the actual technologies used for processing, transportation, and manufacturing operations. Representative datasets are used to represent the actual processes, as appropriate.
Precision Measure of the variability of the data values for each data expressed (e.g. variance)	Precision of results are not quantified due to a lack of data. Data collected for operations were typically averaged for one or more years and over multiple operations, which is expected to reduce the variability of results.
Completeness Percentage of flow that is measured or estimated	The LCA model included all known mass and energy flows for production of the door products. In some instances, surrogate data used to represent upstream and downstream operations may be missing some data which is propagated in the model. No known processes or activities contributing to more than 1% of the total environmental impact for each indicator are excluded. In total, these missing data represent less than 5% of the mass or energy flows.
Representativeness Qualitative assessment of the degree to which the data set reflects the true population of interest (i.e. geographical coverage, time period, and technology coverage)	Data used in the assessment represent typical or average processes as currently reported from multiple data sources, and are therefore generally representative of the range of actual processes and technologies for production of these materials. Considerable deviation may exist among actual processes on a site-specific basis; however, such a determination would require detailed data collection throughout the supply chain back to resource extraction.
Consistency Qualitative assessment of whether the study methodology is applied uniformly to the various components of the analysis	The consistency of the assessment is considered to be high. Data sources of similar quality and age are used; with a bias towards Ecoinvent v3.3 data where available. Different portions of the product life cycle are equally considered; however, it must be noted that final disposition of the product is based on assumptions of current average practices in the United States.
Reproducibility Qualitative assessment of the extent to which information about the methodology and data values would allow an independent practitioner to reproduce the results reported in the study	Based on the description of data and assumptions used, this assessment would be reproducible by other practitioners. All assumptions, models, and data sources are documented.
Sources of the Data Description of all primary and secondary data sources	Data representing energy use at STANLEY's manufacturing facilities represent an annual average and are considered of high quality due to the length of time over which these data are collected, as compared to a snapshot that may not accurately reflect fluctuations in production. For secondary LCI datasets, Ecoinvent v2.2 and v3.3 LCI data are used, with a bias towards Ecoinvent v3.3 data.
